Disclaimer/Intro

- The industry is changing quickly
 - Anything said today may change tomorrow
- Data is hard to find (but slowly improving)
- Difference between Licensed acres, Planted acres, and harvested acres

2020 Preview: CBD Remains Dominant in Hemp Production, But Other Uses Gain Traction

A recent survey from The Jacobsen reveals hemp producers are gaining interest in growing hemp for minor cannabinoids, along with grain and fiber.

Reported U.S. hemp acreage and greenhouse area, 2014-2018

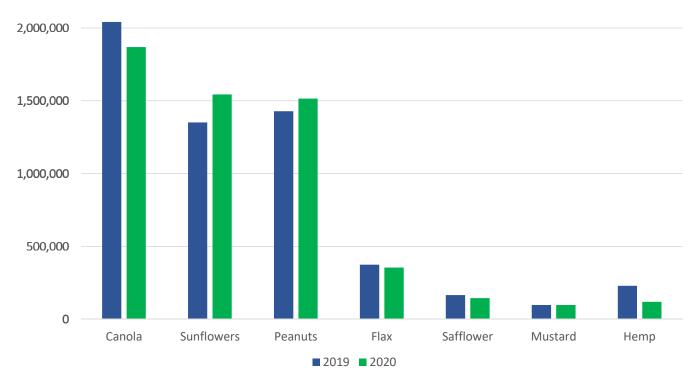

Note: FSA = Farm Service Agency. GH Sq Ft = Greenhouse square feet. Not all States reported data on the same basis. Reported acreage may include planted, harvested, and/or licensed or approved acreage. Not all States reported greenhouse data. Farm Service Agency data include only data reported by Agency customers and are a simple total of reported acres.

Hemp licenses up, but acreage down in 2020 – yet industry is optimistic for growth

Published January 13, 2021 | By Hemp Industry Daily staff

For all the growth that the hemp and CBD industry has seen as a nascent industry in recent years, last year farmers took a step back and devoted fewer resources to the crop – the enthusiasm of previous years tempered by oversupply, supply-chain issues and a lack of infrastructure.

Licensed hemp acreage decreased in 2020 for the first time since the 2014 U.S. Farm Bill established a national hemp pilot program. Licensed acres dropped to about 375,000 acres- down

27% from an estimated 511,000 acres in 2019. And less than a third of those acres were planted in 2020.

Texas Stats for 2020 according to TDA

- Over 5,000 acres permitted
- 1,150 producers licensed (equates to 4.3 acres per producer not including greenhouses)
- 15 million square feet of greenhouse space permitted
- 86 registered processors
- 14 registered labs
- 164 licensed Handler/samplers

Thanks!!!
