

Economic Contribution of Production Agriculture in Texas Counties

Dan Hanselka, Dean McCorkle, John Robinson, and Pancho Abello I September 2024

Texas produces a variety of field, nursery, and vegetable crops, alongside a diverse mix of livestock, dairy, and poultry enterprises that generate economic activity in the state, regions, and counties where these commodities are produced. Hunting, fishing, timber and other agricultural-related activities can also generate economic activity. The focus of this analysis is on the economic contribution of production agriculture in **Kent County**.

Commodity	Cash Receipts ^{1,2}	Economic Output (Sales) ⁴	Value Added ⁴	Jobs ⁴
Нау	\$810,573	\$1,045,645	\$485,032	29
Other Crops	\$248,415	\$334,987	\$84,208	3
Total Crops	\$2,182,812	\$2,924,156	\$1,404,212	82
Cow Calf & Stockers	\$4,926,000	\$7,287,116	\$2,764,207	75
Sheep & Goats	\$315,000	\$407,801	\$302,828	4
Total Livestock	\$5,241,000	\$7,694,917	\$3,067,036	79
Hunting	\$3,850,000	\$4,132,285	\$142,855	154
Horses	\$1,050,000	\$1,326,950	\$1,049,448	29
Timber	\$30,000	\$44,511	\$29,252	0
Total Ag Related	\$4,930,000	\$5,503,746	\$1,221,555	184
Total Government Payments ³	\$3,142,259	\$2,469,309	\$1,013,108	22
Total Effects	\$15,496,071	\$18,592,128	\$6,705,910	367

Economic contribution analysis measures the gross change in economic activity associated with an industry, production agriculture at the county level in this case. Economic activity in production agriculture (direct effect) ripples through the regional economy as farms, ranches, and other agricultural-related enterprises purchase inputs (indirect effect) and pay employees who also make purchases (induced effect). Many farm and ranch production expenses are paid to local suppliers, or other suppliers in the region. Farmers and ranchers also spend part of their profits and/or wages on consumer goods - eating at local restaurants and buying groceries, fuel, utilities, and other consumer items. In turn, the employees of these businesses purchase supplies and spend wages at local or regional businesses. Money is multiplied as it circulates through the economy. Of

course, money also leaks from the county economy as businesses and households purchase goods and services from other parts of the region, state, nation, and world. These leakages reduce the overall economic contribution of agricultural production within the county.

The total effects in Table 1 are the sum of the direct, indirect and induced effects for each of the three indicators: *economic output* (cash receipts plus gross intermediate input sales by supporting industries), *value added* (contribution to the state's Gross Domestic Product, or GDP), and *jobs* (number of full-and part-time jobs). The original economic contribution from farm and ranch production (cash receipts, which includes crop insurance proceeds) leads to *total economic output*, which supports the number of *jobs* (annually) presented in Table 1. *Value added* represents the value added in production (gross receipts less the cost of inputs) through the use of land, labor, and capital. Labor income (not shown in Table 1) is a subset of *value added* which is a component of *economic output*. The three economic indicators represent separate measures of economic contribution and thus cannot be summed.
