

Texas produces a variety of field, nursery, and vegetable crops, alongside a diverse mix of livestock, dairy, and poultry enterprises that generate economic activity in the state, regions, and counties where these commodities are produced. Hunting, fishing, timber and other agricultural-related activities can also generate economic activity. The focus of this analysis is on the economic contribution of production agriculture in **Robertson County**.

Table 1. County-Level Agricultural Receipts and Economic Contribution (2023)

Commodity	Cash Receipts ^{1,2}	Economic Output (Sales) ⁴	Value Added ⁴	Jobs ⁴
Hay & Ensilage	\$31,830,571	\$45,427,451	\$22,224,533	1,139
Cotton	\$10,401,282	\$13,884,248	\$7,683,524	187
Feed Corn	\$6,885,183	\$10,875,798	\$3,127,858	70
Grain Sorghum	\$2,229,589	\$3,521,847	\$1,012,876	23
Other Crops	\$1,532,057	\$2,170,615	\$1,103,082	47
Wheat	\$1,338,200	\$2,113,813	\$607,929	14
Total Crops	\$54,216,882	\$77,993,771	\$35,759,802	1,480
Cow Calf & Stockers	\$71,340,500	\$95,788,790	\$37,669,807	893
Poultry	\$70,562,500	\$93,003,471	\$16,897,945	285
Dairy	\$3,799,400	\$5,128,018	\$1,263,847	22
Other Livestock	\$968,800	\$1,181,765	\$908,717	10
Total Livestock	\$146,671,200	\$195,102,044	\$56,740,316	1,210
Horses	\$2,750,000	\$3,430,179	\$2,852,934	54
Recreation	\$450,000	\$561,302	\$466,844	9
Hunting	\$425,000	\$558,727	\$242,200	34
Fishing	\$150,000	\$131,640	\$130,316	3
Total Ag Related	\$3,775,000	\$4,681,848	\$3,692,294	100
Total Government Payments ³	\$4,961,992	\$3,220,001	\$1,447,438	26
Total Effects	\$209,625,074	\$280,997,665	\$97,639,850	2,815

Economic contribution analysis measures the gross change in economic activity associated with an industry, production agriculture at the county level in this case. Economic activity in

production agriculture (direct effect) ripples through the regional economy as farms, ranches, and other agricultural-related enterprises purchase inputs (indirect effect) and pay employees who also make purchases (induced effect). Many farm and ranch production expenses are paid to local suppliers, or other suppliers in the region. Farmers and ranchers also spend part of their profits and/or wages on consumer goods - eating at local restaurants and buying groceries, fuel, utilities, and other consumer items. In turn, the employees of these businesses purchase supplies and spend wages at local or regional businesses. Money is multiplied as it circulates through the economy. Of course, money also leaks from the county economy as businesses and households purchase goods and services from other parts of the region, state, nation, and world. These leakages reduce the overall economic contribution of agricultural production within the county.

The total effects in Table 1 are the sum of the direct, indirect and induced effects for each of the three indicators: *economic output* (cash receipts plus gross intermediate input sales by supporting industries), *value added* (contribution to the state's Gross Domestic Product, or GDP), and *jobs* (number of full-and part-time jobs). The original economic contribution from farm and ranch production (cash receipts, which includes crop insurance proceeds) leads to *total economic output*, which supports the number of *jobs* (annually) presented in Table 1. *Value added* represents the value added in production (gross receipts less the cost of inputs) through the use of land, labor, and capital. Labor income (not shown in Table 1) is a subset of *value added* which is a component of *economic output*. The three economic indicators represent separate measures of economic contribution and thus cannot be summed.
